Week 2 Oppgaver

1.

let a = [1,2]

let b = [1,2]

Is a == b?

Is a === b?

If not, why not?

2.

function addNumbers(a, b){ return a+b }

Rewrite this as an arrow function

3.

Create an array of cats as JSON objects. Each cat should have name, age, and color.

4.

Filter the cat array you have created where the age is over a certain number.

5.

Using map, return only the cat names from the cat array.

6.

Create a person object, with things like name, age, eye color, etc. Give that object a method that prints the person.

7.

Create a function that takes an array and an element, and returns a new array containing both

8.

Create two objects that each contain different properties. Use the spread operator to combine the two objects into a third object.
